

Bank Customer Churn Analysis — Insights & Recommendations

1. Executive Summary

This report presents insights from a Bank Customer Churn Analysis conducted on 10,000 customer records. SQL (SQLite) was used for data preparation and analysis, while Tableau Public was used to develop an interactive dashboard. The objective was to identify the major drivers of churn and provide business recommendations to improve customer retention.

2. Problem Statement

The bank experiences customer attrition that affects long-term profitability. This project identifies key factors driving churn by analyzing customer demographics, geography, activity status, product ownership, and age to support data-driven retention strategies.

3. Dataset Overview

Attribute	Value
Dataset	Bank Customer Churn
Records	10,000
Tools	SQL (SQLite), Tableau Public
KPIs	Total Customers, Total Churn, Churn Rate
Visuals	Interactive KPI Cards, Pie Chart, Bar Charts, Filter Actions

4. Key Findings

- Overall churn rate is approximately 20.4%.
- Germany records the highest churn rate (~32%), compared with France (~16%).
- Female customers show a higher churn rate than male customers.
- Customers aged 46–60 represent the highest churn-risk group.
- Inactive members are approximately twice as likely to churn as active members.
- Customers with three or more products exhibit extremely high churn and require further investigation.

5. Business Recommendations

- Launch targeted retention campaigns for German customers.
- Re-engage inactive customers using personalized offers and loyalty incentives.
- Review product bundling and customer experience for customers owning three or more products.
- Develop loyalty initiatives for customers aged 46–60.
- Monitor churn KPIs regularly through Tableau dashboards.

6. Conclusion

The analysis indicates that churn is influenced by geography, age, customer activity, gender, and product ownership. These insights can help the bank prioritize high-risk customer segments and design proactive retention strategies.

7. Tools Used

- SQL (SQLite)
- Tableau Public
