# BUSINESS REQUIREMENTS DOCUMENT

## Bank Customer Churn Analysis

| | | | |
|---|---|---|---|
| **Document ID** | **BRD-001** | **Version** | **1.0** |
| Author | Harshit kumar | Date | 01-11-2026 |
| Status | Approved | Project Sponsor | Head of Customer Experience (Assumed) |

# 1. Business Background

The bank is experiencing customer churn. Bank management does not have a simple way to identify which customer groups are most likely to leave or which factor are associated with churn.

# 2. Business problem

Found that Customer churn is 20.4% overall. Churn varies by region and customer activity level, but the current reporting process is only data but does not provide a clear, repeatable way for retention teams to identify high-risk customers.

# 3. Business Objectives

| ID | Objective |
|---|---|
| BO-01 | Monitor churn kPIs |
| BO-02 | Filter customers by region, products and risk level |
| BO-03 | Identify high risk segments |
| BO-04 | Prioritize customer-retention outreach |

# 4. Stakeholders

| Stakeholder / Role | Responsibilities |
|---|---|
| Business Sponsor | Head of Customer Experience |
| Product Owner | Customer Retention Manager(CRM) |
| End users | Retention team and regional managers |
| Delivery team | Business Analyst, Data Analyst, BI Developer, QA Analyst |

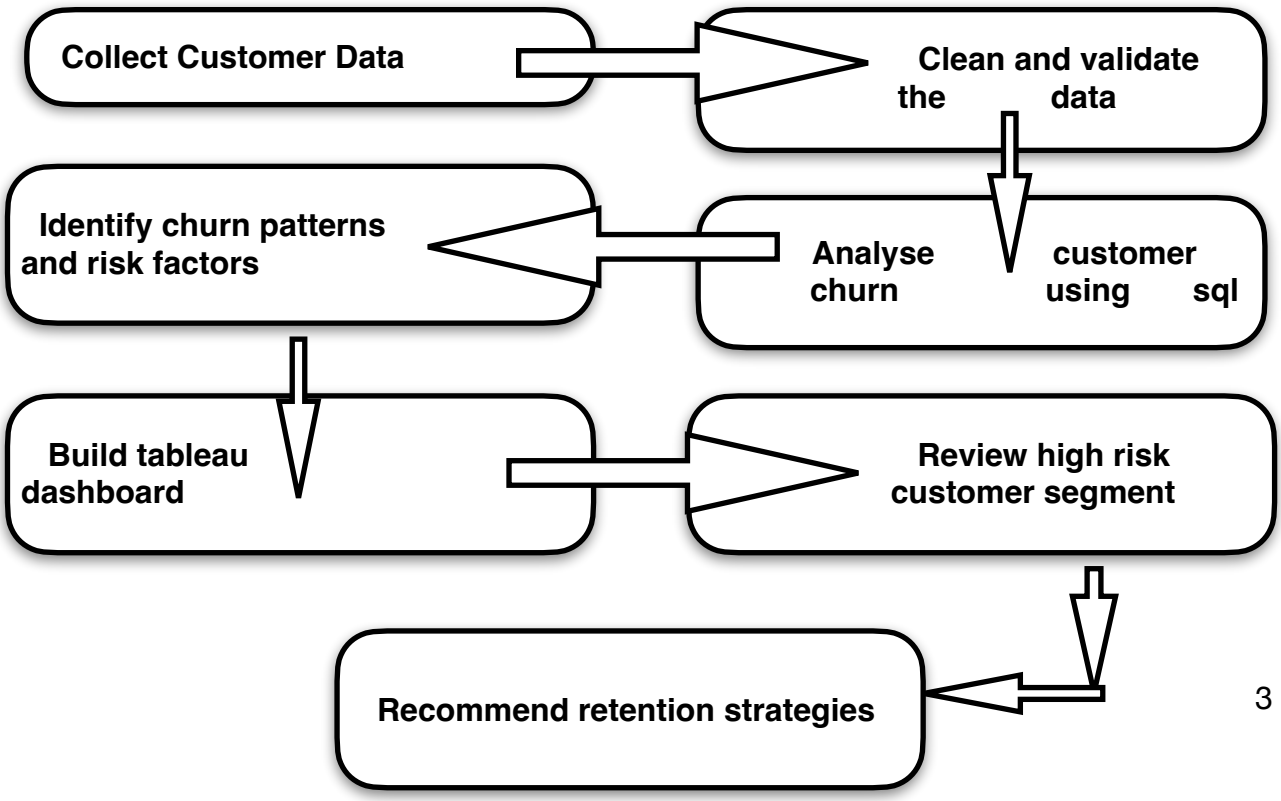

## 5. Scope

| Included | Excluded |
|---|---|
| Churn-rate calculation | Automatic customer messaging |
| Customer segmentation by region and activity | Advertising about bank products |
| Dashboard with KPI cards and charts | Online help guide for customers |
| Filters for region, activity status, and customer segment | Customers acquisition initiatives |

## 6. Business/Functional requirements

- The system shall display overall customer churn rate.
- The system shall show churn by region.
- The system shall show churn by active and inactive customer status.
- Users shall be able to filter the dashboard by region and customer activity.
- Users shall be able to export the filtered customer list.
- KPI definitions must be documented and consistent across reports.

## 7. Workflow

# 8. Business Process

**As-Is**

The bank primarily reviews customer data through historical reports. Customer churn patterns and risk factors may not be consistently analyzed across customer segments, limiting the ability to identify customers who are likely to leave.

**To-Be**

- Collect and validate customer demographic, account, and transaction-related data.
- Analyze customer churn using SQL to identify churn rates and key contributing factors.
- Segment customers based on characteristics such as geographical region, account balance, product usage, and activity status.
- Present churn trends and high-risk customer segments through a Tableau dashboard.
- Provide data-driven retention recommendations to business stakeholders.
- Monitor churn KPIs to evaluate retention performance.

# 9. Success measures

- Retention users can identify high-risk segments without manual calculations.
- Dashboard KPI values match the approved source data.
- Manual reporting time is reduced.
